

Truck Disinfect System

CROP CARE®

Truck Disinfect System

CropCare®'s **Truck Disinfect System** is a sanitation, biosecurity kit engineered to provide optimal spraying capabilities. It helps to prevent the highly pathogenic avian influenza (H5N2) and other animal diseases and to control the threat of infection.

Our Truck Disinfect System integrates many of the necessary common components to apply disinfectant with an undercarriage decontamination system. The system is easy to use and effective for commercial vehicles serving the intensive animal production industries.

Disinfect System Kits

- DS-25** disinfect system base, 25 gal tank, 5.3 gpm pump, suction filter, and inline filter assembly (does not include mounting brackets or wiring harness)
- DS-TR** disinfect system trailer plumbing kit (2 tandem nozzle assemblies, check valve assembly, hose, other related hardware)
- DS-TK** disinfect system, tractor/straight truck plumbing kit (2 tandem nozzle assemblies, 2 steering axle nozzle assemblies, 2 check valve assemblies, hose, other related hardware)
- GK50DS** disinfect system gun kit (Arag® high pressure spray gun, 50' hose, other related hardware)

Engineered by CropCare®. We know spraying.

Components in our Truck Disinfect System are engineered to work together to make it ideal for maintaining bird biosecurity per protocol recommended by the USDA and the Pennsylvania State Department of Agriculture.

Our pre-engineered kit saves you the time required to build a custom system. This enables you to equip or upgrade your trucks quickly with confidence and less aggravation.
